## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

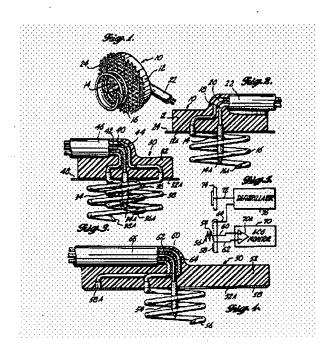

Claims 21-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Egger, et al., in view of Alferness, Hon, and Mullier, et al.

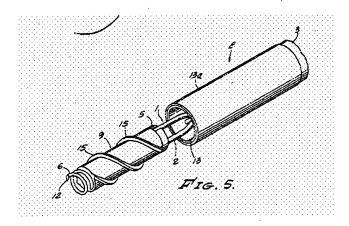

In figure 21, the Eggers, et al., Patent shows a surgical apparatus having first coil and second coil electrodes in parallel designed in a bipolar configuration and equipped for the infusion of conductive fluid to enhance the conductivity between the electrodes. The Eggers, et al., Patent does not disclose the use of electrodes having helical configurations. However, the use of helical electrodes is conventional in the art as evidenced by the teachings of Alferness, Hon, and Mullier, et al.

Application/Control Number: 10/014,388

Art Unit: 3763

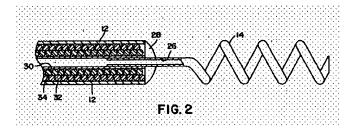

The Alferness Patent shows in figures 1-4 above, various electrode configurations that include helical coils. Importantly, figure 3 shows two helical electrodes in parallel in a multi-polar configuration. Additionally, the **Hon Patent** shows in figure 5 below, an embodiment having two helical electrodes (12,15) in parallel.

Finally, the Mulier, et al., Patent also discloses the use of helical coils and the infusion of conductive substances. In figure 2, the patent shows a helical coil used for RF ablation. The helical coil includes apertures for the infusion of conductive fluid.

Application/Control Number: 10/014,388

Art Unit: 3763

Based on the above observations, it would not be unreasonable to suggest that for a person of ordinary skill in the art, modifying the electrodes in the Egger, et al., Patent with helical electrodes as taught by the Alferness, Hon, and Mullier, et al., would have been considered an obvious design alternative. Furthermore, based on the teachings of the patents cited in this rejection, and specifically, the Mulier, et al., Patent, the subject matter disclosed in the cited claims appears to suggest a duplication of well known ablation elements as shown in figure 2 above. Accordingly, the mere duplication of figure 2, in a bipolar configuration as disclosed by the Eggers, et al., Patent cannot be considered a novel invention.

## Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 3763

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manuel Mendez whose telephone number is 703-308-2221. The examiner can normally be reached on 0730-1800 hrs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Brian Casler can be reached on 703-308-3552. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
